

Thanks for your support for first version of ArchVis VR, We added an interactive place to add some tutorial/instruction into your project.

Commentary:

With the new commentary system in ArchVis VR you can add tutorial and instruction to your project as simple as possible by just copy pasting `BP_Commentary_Box` blueprint in your map.

Please add `BP_Commentary_Box` to your level from Content/ArchVisVR/Blueprints/Comment when you click on that actor in your level you can add options like this:

Border width padding: Add extra padding amount to existing padding.

Preview mode: To show a preview in editor, by activating this in play mode you can't open/close texts.

Lines: Add an element for each line of your text inside this.

Disable particle effect: Disable particle effect for increasing performance.

Minimum distance to check player: Minimum amount of distance to check player location, when player distance is less than this amount info will rotate to player.

You can Open / Close this comment box by shoulder button on your motion controller.

If you have any question or need to add new abilities to your personal project feel free to contact us at:
