

How to control and work with Motion Controllers?

- 1- Teleport
- 2- Open/Close Options
- 2- Take picture with camera
- 3- Pick up Objects/Menus

- 1- You can teleport to different locations in your map by holding touch pad button and then aim to that location, when you release that button you'll teleport to aimed location.
- 2- A- The pointer is act like mouse cursor but in 3D world, when your pointer is on an object with active options or that object is related mesh to another object you can open menus with that button.
B- When you pick a camera you can take a picture with that button.
Note: This button is only active on right hand.
- 3- You can animate your hands in VR with trigger button for pick up object you must push trigger button about 70%.

You can select option with your right hand by just touching them. When your right hand is close to options it will change animation on the hand.
